

Exhibit 14. VACCINATIONS

First and foremost, I do not possess any significant knowledge and even less experience in the practice of health issues, let alone vaccination!

*What I do possess however, is significant academic knowledge in the facilitation of **ERM** education, and advisory experience on the topic of "risk".*

Here is what "triggered" my attention- a published headline:

"Fast COVID-19 vaccine timelines are unrealistic and put the integrity of scientists at risk"

*(I don't prescribe to "fake news" or "alternative facts" as a rule but this one is from a **CANADIAN** source – "close to home" and of course "risk mitigation" is foremost on my mind!).*

[The article](#) alleges that the scope and length of vaccine testing experiments usually mean decade-long timelines for development! (?)

The second "trigger" is far more troublesome: Legislation recently invoked by the USA Government- viz

Public Readiness and Emergency Preparedness Act for Medical Countermeasures Against COVID-19

*This USA legislation provides immunity from liability (except for willful misconduct) for claims of loss caused, arising out of, relating to, or resulting from administration or use of countermeasures to diseases, threats and conditions determined by the Secretary to constitute a present, or credible risk of a future public health emergency to entities and individuals involved in the development, manufacture, testing, distribution, administration, and use of such countermeasures. **A PREP Act declaration is specifically for the purpose of providing immunity from liability, and is different from, and not dependent on, other emergency declarations.** (This would certainly provide litigation protection for **USA corporations** researching and marketing vaccines under the prescribed conditions of the Act.)*

[Please click on this link:](#)

*Framing the above questions into an **ERM** paradigm is not too late to consider; the greatest advantage is that this would be a "**proactive**" process rather than a "**reactive**" process by-and-large dictated by the **WHO**, which relevant competencies it lacks; the implied "risks" just demonstrated go far beyond health issues.*

Any "vaccine" initiative originating from the USA should be a "flag" for caution.

*(Please refer to **Exhibits 20** and **21** for other vaccination threatening issues- **WJP**).*
