

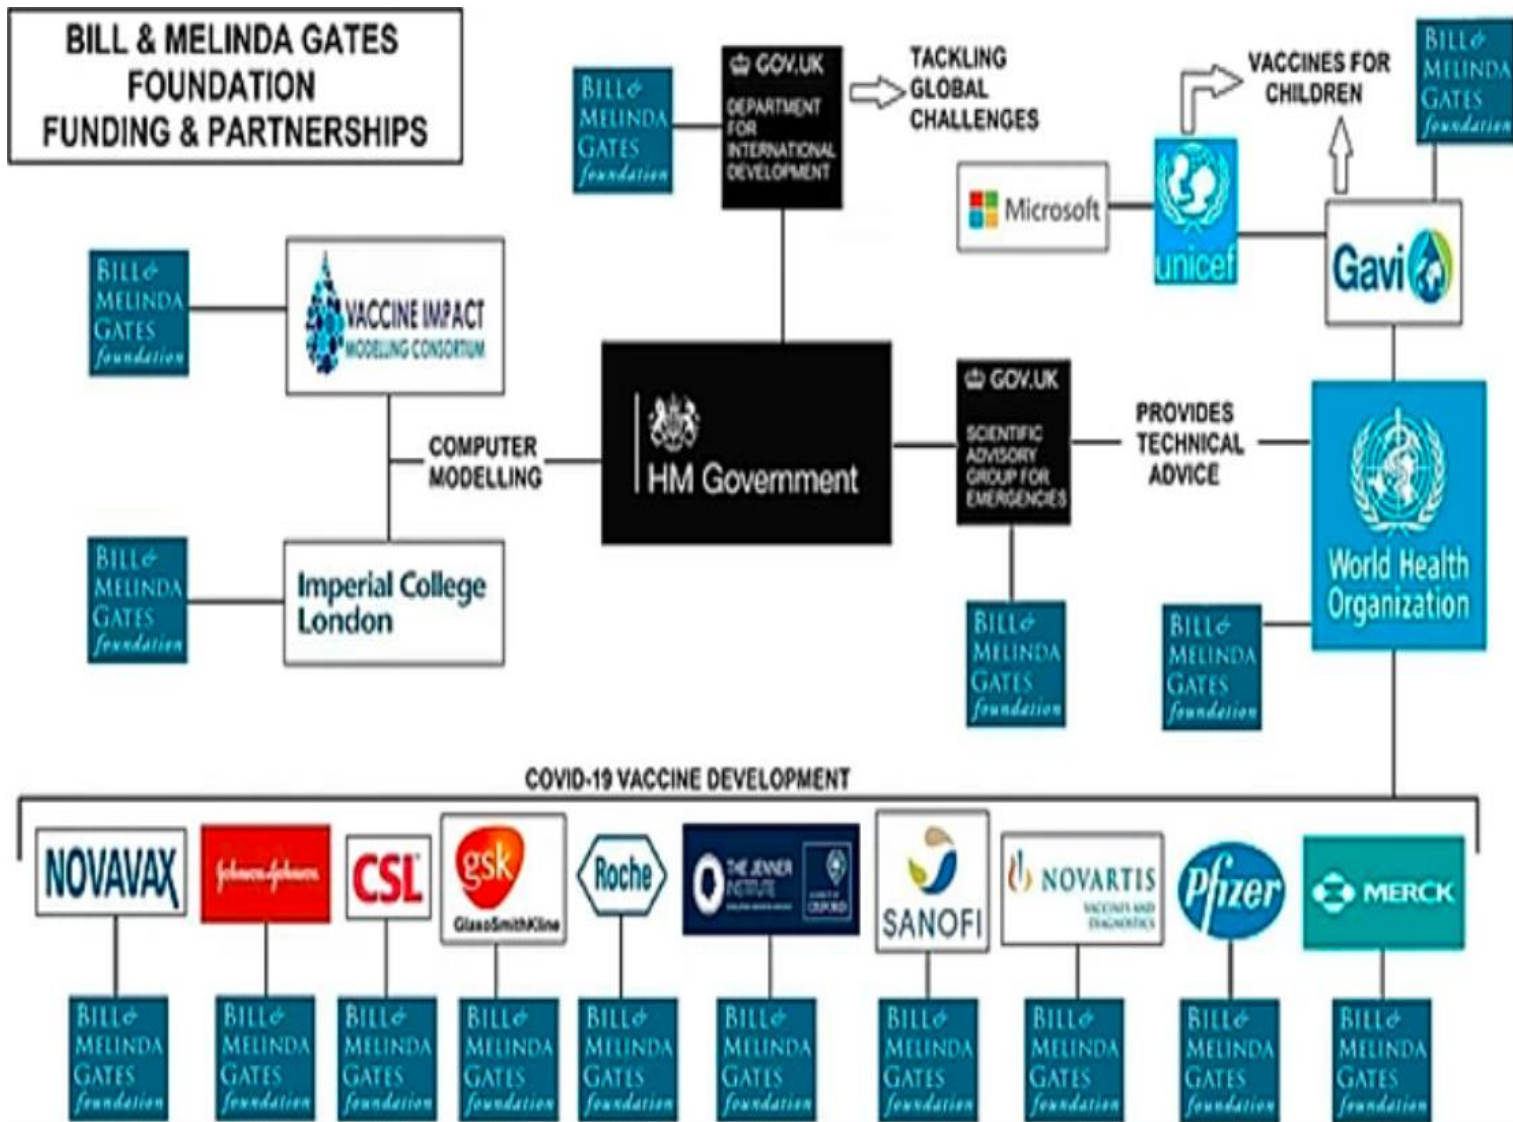

Exhibit 20 - Gates Foundation, World Health Organization and Vaccinations

(Extraction from this link – **WJP**)

(To be noted- the **"World Health Organization"** is included in this grouping- The influence and scale of the Bill and Melinda Gates Foundation are stunning, as can be seen in this chart.)

Interesting quote from the article- (link above):

"... Also, Mr. Kennedy noted on April 16th, 2020, that a Pentagon study revealed that the flu vaccine raises the risk of the coronavirus by 36%..."

January 2020 Pentagon Study Shows Influenza Vaccination Increases Risk of Coronavirus by 36%

ABSTRACT

Purpose: Receiving influenza vaccination may increase the risk of other respiratory viruses, a phenomenon known as virus interference. Test-negative study designs are often utilized to calculate influenza vaccine effectiveness. The virus interference phenomenon goes against the basic assumption of the test-negative vaccine effectiveness study that vaccination does not change the risk of infection with other respiratory illness, thus potentially biasing vaccine effectiveness results in the positive direction. This study aimed to investigate virus interference by comparing respiratory virus status among Department of Defense personnel based on their influenza vaccination status. Furthermore, individual respiratory viruses and their association with influenza vaccination were examined.

Results: We compared vaccination status of 2880 people with non-influenza respiratory viruses to 3240 people with flu-negative results. Comparing vaccinated to non-vaccinated patients, the adjusted odds ratio for non-flu viruses was 0.97 (95% confidence interval [CI]: 0.86, 1.09; $p=0.60$). Additionally, the vaccination status of 3349 cases of influenza were compared to three different control groups: all controls (N=6120), non-influenza positive controls (N=2880), and flu-negative controls (N=3240). The adjusted ORs for the comparisons among the three control groups did not vary much (range: 0.46-0.51).

Conclusions: Receipt of influenza vaccination was not associated with virus interference among our population. Examining virus interference by specific respiratory viruses showed mixed results. Vaccine derived virus interference was significantly associated with coronavirus and human metapneumovirus; however, significant protection with vaccination was associated not only with most influenza viruses, but also parainfluenza, RSV, and non-influenza virus coinfections.

Illnesses per 100 Patients During 2017-18 Influenza Season

“Vaccine derived virus interference was significantly associated with coronavirus and human metapneumovirus.”

Under the ERM concept the connection between the Bill and Melinda Gates Foundation and the World Health Organization is clearly a conflict of interest evidenced by the information above and from the fact that the Bill and Melinda Gates Foundation is WHO'S largest financial contributor.

The situation represents a serious risk that requires attention and risk mitigation. -WJP

Please refer to **Exhibit 21** for the latest news regarding vaccinations and supply chain concerns. - **Notable** – the names of **“NOVAVAX and GAVI”** included in the chart above – more conflict of interest? - **WJP**
